### Hach AV9000 Analyzer Module

By pairing Hach's Submerged AV Sensor with our state-of-the-art Hach AV9000 Analyzer Module, you create a powerful Hach Submerged Area Velocity Meter (FL900AV) which provides "cleaner," more precise data than ever before.

#### Improved Accuracy

The AV9000 Area Velocity Analyzer module is compensated for temperature, thus eliminating potential velocity errors of 2.7% over a 10°C seasonal swing\*. Its advanced multi-scale digital Doppler analysis provides the optimal combination of resolution and noise immunity. Mirror

Image Processing™ eliminates sign errors and the advanced Target Set Processing™ reduces the impact of dominant targets (particles) in the stream to deliver a more representative velocity.
